INSIGHT 1: Total count of rows is 8807 and no of columns is 12

INSIGHT 2: ALL THE Data are Non numeric Columns

INSIGHT 3: THERE ARE 4307 NULL VALUES FOUND

INSIGHT 4: THERE ARE NO DUPLICATE VALUES

INSIGHT 5: DESCRIPTIVE STATS OF THE CATEGORICAL COLUMNS

#### Observations -

- There are total 4307 missing values in the entire data set.
- · Columns that contains Null Values are:

```
director 2634
cast 825
country 831
date_added 10
rating 4
duration 3
```

#### df.shape

## → 3.b) Imputation of Missing values:

Replacing the missing value of perticular column looking at above info, we can impute the cells of columns "director

```
# fill missing values in Director Column with "No_Director"

df.director.fillna("No_Director", inplace = True)
# fill missing values in Cast Column with "No_Cast"

df.cast.fillna("No_Cast", inplace = True)
# fill missing values in Country Column with most frequent country apreared in that column (mode of the 'Country')

df['country'].fillna(df['country'].mode()[0], inplace = True)
# Dropping irrelevant rows with minimal null values

df.dropna(subset = ["date_added", 'rating','duration'], inplace = True)
# Re-check the data

df.head()
```

### Univariate Analysis: Pie Plot for Type of Content

Let's start by understanding the distribution of Movies vs. TV Shows on Netflix.

```
# Comparision of Type of Content Produced
```

```
labels = value_counts_type.index
sizes = value_counts_type.values
explode = (0.1 ,0)
plt.pie(sizes, labels=labels, explode = explode, shadow = True, autopct='%1.1f%'', startangle = 180)
plt.title('Movies V/S TV Shows')
plt.axis('equal')
plt.show()
```

#### Observations -

Nearly 70% content on the Netflix is of Movies adn remaining 30% is of TV-Shows

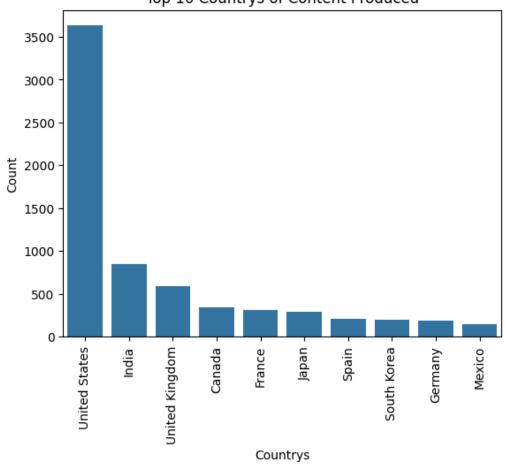

```
# Top 10 Countrys of Content Produced
top_countrys = value_counts_country.head(10)

x_count = top_countrys.index
y_count = top_countrys.values

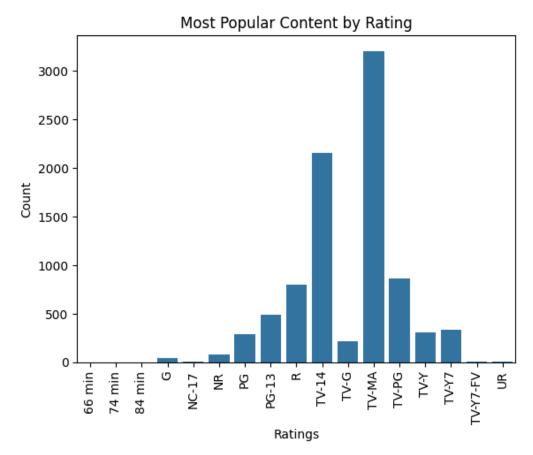

sns.barplot(x = x_count, y= y_count)
plt.xticks(rotation = 90)
plt.xlabel('Countrys')
plt.ylabel('Count')
plt.title('Top 10 Countrys of Content Produced')
plt.show()
```

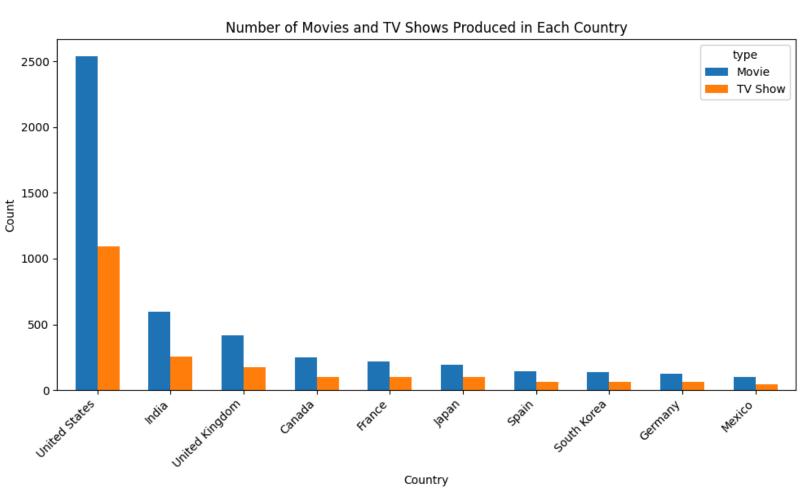

```
# Most popular Content by Rating
x_r = value_counts_rating.index
y_r = value_counts_rating.values
sns.barplot(x = x_r, y= y_r)
plt.xticks(rotation = 90)
plt.xlabel('Ratings')
plt.ylabel('Count')
plt.title('Most Popular Content by Rating')
plt.show()
```

## 5) Comparison of TV Shows and Movies

```
# No of Movies vs No of TV-Shows Produced in top 10 Contries
# grouping the dataset by country and type and count the number of rows in each group
df_grouped = df_exp.groupby(['country', 'type']).size().reset_index(name='count')
\ensuremath{\text{\#}} filtering the dataset to only include movies and TV shows
df_filtered = df_grouped[df_grouped['type'].isin(['Movie', 'TV Show'])]
# pivot the dataset to create a table with countries as rows and movie and TV show counts as columns
df_pivoted = df_filtered.pivot(index='country', columns='type', values='count')
# sort the table by the total number of movies and TV shows
df_sorted = df_pivoted.sort_values(by=['Movie', 'TV Show'], ascending=False)
# pick the top 10 countries
df_top_10 = df_sorted.head(10)
# plot the results as a dodged bar plot
ax = df_top_10.plot(kind='bar', stacked=False, figsize=(10, 6), width=0.6)
ax.set_title('Number of Movies and TV Shows Produced in Each Country')
ax.set_xlabel('Country')
ax.set_ylabel('Count')
plt.xticks(rotation=45, ha='right')
plt.tight_layout()
plt.show()
```

 $\overline{2}$ 

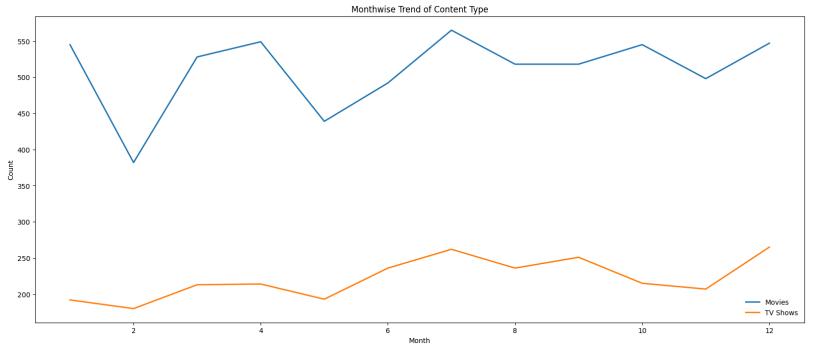

| country        |      |      |
|----------------|------|------|
| United States  | 2540 | 1090 |
| India          | 599  | 252  |
| United Kingdom | 416  | 172  |

#### **Data-Backed Business Insights**

- 1. Content Diversity Quantifiable Insight: Netflix's catalog is diversified with productions from 748 unique countries and covers a wide array of genres. The top three countries contributing to the content are the United States (2,818 titles), India (972 titles), and the United Kingdom (419 titles). Business Interpretation: This broad geographical and genre-based diversity suggests that Netflix is well-positioned to cater to a global audience with varied tastes. This is a strong asset for market penetration and customer retention.
- 2. **Focus on Recent Content** Quantifiable Insight: A significant chunk of Netflix's content has been released in recent years. For instance, the years 2018, 2017, and 2019 collectively account for 3,209 titles, making up approximately 36.4% of the total catalog. Additionally, the median release year for TV Shows is more recent compared to Movies. Business Interpretation: This focus on newer content likely aligns with current viewer preferences for fresh and relevant material. It also indicates that Netflix is actively keeping its content up-to-date, which is essential for maintaining subscriber interest and attracting new customers.
- 3. **Ratings and Target Demographic** Quantifiable Insight: The ratings 'TV-MA' and 'TV-14' dominate the content on Netflix, with 3,207 and 2,160 titles respectively. These two ratings alone make up around 61.2% of all content. Business Interpretation: The predominance of these ratings suggests that Netflix's primary target demographic is mature and teen audiences. Content strategies targeting these demographics are likely to be more successful.
